

A detailed technical drawing of a valve assembly, shown in a perspective view. The drawing is rendered in light blue lines on a white background. It features a central vertical stem with a handle at the top, surrounded by various seals, gaskets, and housing components. The drawing is positioned in the upper left quadrant of the page, with its lines extending towards the center and right. The overall style is clean and professional, typical of engineering or industrial design documentation.

BS NRS Resilient Seat Gate Valve

PN16/PN25

Fig. 3249

Valve Standard:

Comply with BS 5163 TypeA

Features

- Handwheel or removable square key operated
- Full bore ports avoids the ingress of debris
- Fully encapsulated rubber disc
- Integral stem nut ensuring stem fixing and corrosion prevention
- Working Temperature:-20°C to 110°C(EPDM Seat)
-10°C to 80°C (NBR Seat)

Handwheel Operated

SquareKey Operated(Optional)

Single-Sphere Flexible Rubber Joint with Floating Flanges

PN16/PN25

Fig. GFLEX-F1

Features

Achievements

Having been used in more than 20 countries for over 30 years, GALA brand products proudly demonstrate their popularity.

Reliability

Unparalleled durability is guaranteed by the distinctive and strict design standards of GALA

Quality

Manufactured in GALA's own factory under thorough control with ISO9000 quality management system.

Materials

No.	Parts	Materials
1	Flange	Ductile Iron (32 - 300) Mild Steel (350-600)
2	Reinforcing Ring	Carbon Steel
3	Inner Rubber	EPDM
4	Outer Rubber	EPDM
5	Reinforcing Cord	Nylon

Flanges on ANSI, BS, etc. available.
The flange material can be changed to Mild Steel, SUS304 and SUS316. Please consult us.
JIS16K / JIS20K Flanges are all Mild steel (32~600).

Note: Information listed might be subject to change without notice due to continuing products development.

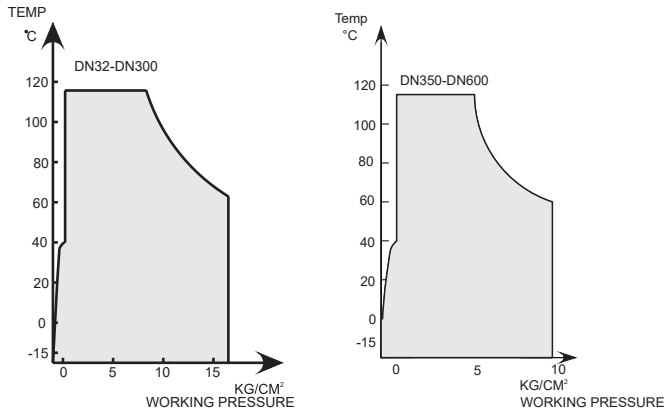

Single-Sphere Flexible Rubber Joint with Floating Flanges

PN16/PN25

Fig. GFLEX-F1

Operating Conditions and Performance

Working Temperature vs. Working Pressure

Applications

This product is mainly applicable for piping systems in commercial and industrial buildings and plants.

Applicable fluids are exclusively water including cold water, warm water, cooled water, sea water, etc.

This product can not be used for drinking water, pool water, oil, or boiled water.

Technical Parameters

Size	Operating Pressure	Bursting Pressure	Vacuum Rating	Temperature
	Psig(kg/Sqcm)	Psig(kg/Sqcm)	mmHg	°C
DN32~DN300	225(16)	682(48)	750	-15~115

Fig. GFLEX-F1

Operating Conditions

Note: Information listed might be subject to change without notice due to continuing products development.

Twin Sphere Rubber Joint with Floating Flanges

PN16/PN25

Fig. GFLEX-F2

Features

Fit for suction and delivery (discharge)

Additional Features and Benefits

1. Additional gaskets and/or packing are not required.
2. Simplified installation in all piping systems using easy alignment flanges.
3. Ability to absorb considerable elongation and compression of pipes caused by temperature changes prevents piping system breaks and equipment down time.
4. Absorbs the force created by pulsating water and reduces the effect of water hammer.

Typical Applications

1. Cold and warm water pressure piping systems in commercial and industrial buildings and plants.
2. Pump and turbine piping used for power generation plants, industrial machinery and pump blowers.
3. Feed-water and drainage piping for water, wastewater, and sanitary system.

Note: FLEXIBLE RUBBER JOINT is not applicable for use with oil, air gases, hot water supply lines and with pool water.

Note: Information listed might be subject to change without notice due to continuing products development.
